Features: Baseplate: aluminum gravity cast fitted with fixed super strong Cro/moly kingpin so no Rattles. With easy access to all fixings.

Hanger: aluminum gravity cast fitted with cro/moly axle With a deep cup in the hanger designed to get the best from the Bushings. Urethane is slippy stuff & wants to escape, the deep cup in both sides Of the hanger holds the bushings so that you get the best rebound from The bushing instead of it popping out.

Bushings: Custom super high rebound clear ruby red bushings made in usa. Large hourglass shape bottom bushing gives a nice spring from turn to Turn. Top conical bushing custom made to fit into the cup washer so no Bushing bulge outs! Gnarly black graphite loaded pivot for a squeak free ride. Aluminum parts are gravity cast for the best strength. With this method you get a solid casting with no air bubbles. We hope you enjoy the ride. Holey truck they turn!!
