Loaded Hammerhead 37 Adjustable Flex. Ready to bomb some steeps and roll some parking garages with no bite? The Hammerhead has no fear! Ultra fluid surf style carving with no resistance. Comparable to the Fish shape deck you can initiate tight turns through the front DCS system and maintain stability/drive through the rear. This board will be SURE to get you noticed.

Special Feature: Tail is built with 2 truck placement options so the flex can be changed by moving the truck forward (stiffer) or backward (flexier). Changing truck placement and therefore wheelbase affects the turning radius of the board.

Specs:

- Length = 38"
- Wheelbase = 29" - 32"
- Weight = 6.6 lbs.
- Deck = High quality epoxy and Triaxle fiberglass sandwich w/ vert-lam Bamboo core.
- Concave and Convex camber
- Trucks = A complimentary Hybrid of the Flowboard "El Arco" Deep Carve System (DCS) and Tracker RTS 149 Slalom Trucks with specially configured large cups, high kingpins and "medium" stimulator bushings.
- Wheels = (7) 72mm 82a Urban Assaults and (2) 70mm, 82a Kryptonite Hawaii Ks.
- Bearings = Max Abec 5

Special Note on Wheels The Urban Assaults are fast and grippy. Their aerated cores allow for consistent high speeds without melting while their softness increases their speed and grip. These wheels should be rotated as they wear down. Please visit: www.Flowlab.com for more info. The double radius narrow Kryptos speed up the board and are intended for controlled rear drift.
