Fresh news about Rayne's carbon-fiber goodness from the crew in North Van...

Rayne Longboards' Carbon Fiber Racedecks

The deeliteful Hellcat.

"The 2008 Carbon Dee-Lite Hellcat and Avenger are the pinnacle of Rayne's line and the best race boards on the market. They now come with 21 carbon stringers for added strength/rigidity. The stringers, in conjunction with the foam core, make both boards very light. We've added a cross-grained nose section which runs horizontally on the front of the board, adding strength and protection from those nasty curbs. Each board (like all our boards) is hand-crafted in our factory in North Vancouver, Canada and has been meticulously pored over to ensure it is worth every penny. We're proud to show them off on Silverfish!

Click through to see more and find out how to get one!

The Dee-Lite Avenger.

The Carbon Hellcat and Avenger both cost \$400.00 but are definitely worth the money, considering the other options on the market. The improvements made on these boards are leaps and bounds beyond anything we've done yet &ndash; they are the definition of a performance race board.

Check out the noseblocking.

If you need reference to the quality and function of either board simply ask Kevin Reimer how he enjoys his. We currently have them in stock! Give us a shout at the factory to claim yours!
